About me

Final-year Computer Science student with expertise in full-stack development and scalable applications. Seeking international opportunities to grow professionally in a dynamic technical environment with strong mobility and adaptability.

Education

2023–2026

BUT Informatique (180 ECTS)

IUT Lyon 1 – Claude Bernard University, France

- Specialization: Application Realization (RA) track, focusing on software engineering and system design.

2020–2023

BAC (STI2D)

Lycée Claude Lebois – Saint-Chamond, France

- Specialization: Information Systems and Digital Technology (SIN).
- Distinction: Graduated with Mention Très Bien (High Honors).

Professional Experience

APRIL 2025 –
AUGUST 2026

GROUPE DIAGRAM | Saint-Étienne, France

Software Developer (Apprenticeship)

Handled full-cycle development of diverse business applications for external clients, focusing on robust backend logic and efficient system maintenance in an Agile environment

Hard Skills

Mathematics & Analytics :

Statistics & Probability
Graph Theory
Discrete Mathematics
Data Analysis
Mathematical Optimization.

Software Engineering :

Object-Oriented Programming : Java | Spring Boot
Algorithm Design & Complexity
Database Management : SQL | NoSQL
Fullstack Development : Angular | NodeJS | PHP | Python

DevOps & Tools :

Git | Docker | CI/CD (GitHub Actions or GitLab CI).

Soft Skills

Team Working
Analytical Thinking & Problem Solving
Collaboration in Agile Environments
Adaptability & Autonomy
Technical Communication

Languages

French (native)
English B2 (TOEIC 825/990)

Hobbies

Sport
Fashion
New technologies

Projects

Cloz – Personal Stylist (Ongoing Development)

Flutter, FastAPI, TensorFlow

- Developing a social fashion platform where users can share daily outfits and receive ratings from followers, creating a community-driven wardrobe inspiration network.
- Building a cross-platform mobile application using Flutter with intuitive UI for seamless outfit sharing and social interaction.
- Implementing backend services with FastAPI to handle user profiles, outfit uploads, and real-time social engagement features.
- Planning integration of AI-powered style recommendation engine to provide personalized fashion advice based on user preferences and trends.

Air Traffic Management System

Java

- Developed a high-fidelity simulation for managing French national air traffic (fictional), handling real-time flight paths and airspace coordination.
- Focused on algorithmic complexity and optimized data structures in Java to ensure system reliability and conflict prevention in a dense simulation environment.
- Implemented rigorous logic for flight scheduling and trajectory monitoring, demonstrating strong back-end engineering skills.

Airconcess – Aircraft E-commerce Platform

React, PHP

- Designed and implemented a dedicated retail platform for the purchase and sale of specialized aircraft.
- Built a dynamic and responsive frontend using React to provide a seamless user experience for browsing and filtering aircraft inventory.
- Developed a secure backend using PHP and MySQL to manage transactions, product data consistency, and user accounts.

Corporate & Student Portal

Spring Boot, Angular

- Engineered a professional networking platform to facilitate interactions and recruitment between students and partner companies.
- Architected a secure RESTful API with Spring Boot and managed a modern, component-based frontend with Angular.
- Integrated collaborative features for project management and professional relationship tracking within a unified dashboard.
